

User will use this app as spend management. This will keep track of how much the user is spending and where. The app will require date, amount, and description where they spent the money then user will press + or - to add it to the history section of the app.

For the UI design I just used what was given to since no change need to be made. It has total of 3 edit text that being date, amount, and description with two button + and -. There is also textView box and a linear layout for history.

UPDATE: Since the last project I added a search function for date range and amount range. User will be able to input/select data to search and filter out the result as they want. For example you can select start date as 2020-04-01 and end date as 2020-04-19 it will only show your adding and spending during that time period of time. Same case for amount too.

Current Balance		
Date	Amount	Text
		<div><div>+</div><div>-</div></div>
Data Range	<div>Start Date</div>	<div>End Date</div>
Amount Ranger	<div></div>	<div></div>
	<div>Search</div>	
History
