Users will be using this app for taking notes and editing their notes. The instructions  and requirements were not too clear on this project. The bottom part of the portion will be a list of notes users saved.

Use case: User will type the notes in the text box. After done typing the user will press the save button which then it will save the notes into the list on the bottom part of the app. When user press save again it will again add the notes into the list on the bottom part of the app. If a user wants to edit his previous note, the user clicks on the note he wants to edit. Once clicked it will become an edit text box.
